EXPERIENCE

Game Programmer

Nytwolf Games

April 2026 - Present, Coimbatore, India

- Migrated core gameplay framework (game mode/state, controller, camera, entity actors) from Blueprint to C++, improving performance and maintainability on a large-scale strategy title.
- Built a data-driven localization/flavor-text pipeline backed by DataTables (JSON-sourced), replacing hardcoded strings with a keyed lookup system.
- Extended several core gameplay systems on a large-scale strategy title - inter-faction diplomacy/negotiation, a covert-ops/agent subsystem, resource-economy and trade mechanics, and unit-recruitment and event systems.
- Designed and implemented 15+ UI widgets and panels from Figma designs within the project's MVVM architecture (Model/View/Controller separation via data-bound view-models, view widgets, and handler controllers), spanning HUD, tooltip, negotiation, battle, and progression screens.
- Built headless Unreal Insights profiling pipeline (.utrace → CSV → script analysis) and used it to optimize Slate/UMG HUD - cut widget paint cost -75 - 90% on two HUD trees, verified with trace data and removed all tick logic from widgets and used invalidation boxes to improve UI performance.
- Built reusable, pinnable UMG tooltip/widget framework with self-repaint logic to solve Unreal's default widget-duplication limitation.

Unreal Engine Developer

Highavenue Creative Labs

January 2025 - April 2026, Remote

- Game Mechanics - Implemented multiplayer gameplay features - fortification, animal riding system, VFX, throwables using UE's Client - Server networking model.
- Utilized GAS and Actor Component to create a multiplayer gameplay system consisting of turrets and health drones.
- Backend - Integrated Firebase Authentication and Cloud Firestore database using third party plugins to store user data securely and manage player profiles. Configured current matchmaking system to a custom room setup using AWS plugin and Firestore database.
- Frontend - Implemented a stack based UI system for smooth and flexible control of screens. Developing login and game mode screens and implemented changes to existing screens as requested.
- Animation - Implemented animation blueprints using layered blending, animation interfaces, upper-body/ lower-body separation for characters.

QA Tester- Build Verification

Rockstar Games

November 2020 - September 2023, Bengaluru, India

- Performed extensive testing on beta builds of Grand Theft Auto VI and GTA Trilogy - The Definitive Edition.

PROJECT

SOULSLIKE ACTION COMBAT SYSTEM

github.com/vicky2315/action-combat-prototype • June 2025 - September 2025

- Designed and implemented a complete melee combat system using Unreal Engine C++, including hit-tracing, damage events, animation notifies, and responsive enemy reactions.

SLEIPNIR

Abertay University • github.com/vicky2315/CaelumProject • January 2024 - April 2024

- A creepy first-person shooter inspired by Half-Life and Doom developed along with a team of 7 people for the Game Design and Development module at Abertay.

EDUCATION

Master of Science in Computer Games Technology

Abertay University • Dundee, Scotland • 2023 - 2024 • 2.86

- Relevant Coursework : Game Design and Development, Applied Mathematics and Artificial Intelligence, Network Game Development, Advanced Procedural Methods.

SKILLS

Game Engines: Unreal Engine, Unity

Programming Languages: C++, Java, Python, Javascript

Other Technologies: DirectX 11, Perforce, GitHub, JIRA, Monday.com
